

Use of Starter Order of Finish (Should rarely need to use!)

- a. No watch times (All 3 timers fail to get a watch time) – Use order of finish to determine a time (0.01 faster than the next place). Mark judge's decision.
- b. Only one watch – Check that it places the swimmer close to recorded Order of Finish (Order should not change unless times are more than 0.30 second difference). Mark judge's decision if order changed.
- c. Only two watches and they are NOT within 0.30 seconds of each other, use average of watch times and then confirm order of finish. If order of finish changes, mark judge's decision.
- d. Two watches that are within 0.30 seconds, use average time.
- e. Three watches, use median (middle) time.
